

# BY THE NUMBERS

## CUTTING CARBON POLLUTION FROM POWER PLANTS

---

On June 2, 2014, the U.S. Environmental Protection Agency, under President Obama's Climate Action Plan, proposed a commonsense plan to cut carbon pollution from power plants. The science shows that climate change is already posing risks to our health and our economy. The Clean Power Plan will maintain an affordable, reliable energy system, while cutting pollution and protecting our health and environment now and for future generations.

### Cleaning Up Power Plants

- Power plants are the **largest source** of carbon dioxide emissions in the United States, making up roughly **one-third** of all domestic greenhouse gas emissions.
- All told—the Plan puts our nation on track to cut carbon pollution from the power sector by **30 percent** by 2030—that's about **730 million metric tonnes** of carbon pollution.
- That's equal to the annual emissions from more than **150 million cars**, or almost **2/3s of the nation's passenger vehicles** – or the annual emissions from powering **65 million homes, over half the homes in America.**

### Big Public Health and Climate Benefits

- The Clean Power Plan has public health and climate benefits worth an estimated **\$55 billion to \$93 billion** per year in 2030, far outweighing the costs of **\$7.3 billion to \$8.8 billion.**
- Reducing exposure to particle pollution and ozone in 2030 will avoid a projected
  - **2,700 to 6,600** premature deaths
  - **140,000 to 150,000** asthma attacks in children
  - **340 to 3,300** heart attacks
  - **2,700 to 2,800** hospital admissions
  - **470,000 to 490,000** missed school and work days
- From the soot and smog reductions alone, for every dollar invested through the Clean Power Plan—American families will see **up to \$7** in health benefits.

- The Clean Power Plan will reduce pollutants that contribute to the soot and smog that make people sick by **over 25 percent** in 2030.
  - **54,000 to 56,000 tons** of PM<sub>2.5</sub>
  - **424,000 to 471,000 tons** of sulfur dioxide
  - **407,000 to 428,000 tons** of nitrogen dioxide

### Number of power plants covered by the Clean Power Plan

- In the U.S., there are **1,000 fossil fuel fired power plants** with **3,000 units** covered by this rule.
- Utility planners are already making plans to address an aging fleet. The average age of coal units is **42 years**. The average age of oil units is **36 years**. The average age of natural gas combined cycle units is **14 years**.

### State climate, energy efficiency and renewable energy policy statistics

- States, cities and businesses have set energy efficiency targets, increased their use of renewable energy, and made agreements to cut carbon pollution. These are the kinds of programs that states will be able to use to cut carbon pollution under this proposal.
  - **47** states with utilities that run demand-side energy efficiency programs
  - **38** states with renewable portfolio standards or goals
  - **10** states with market-based greenhouse gas emissions programs
  - **27** states with energy efficiency standards or goals

### Proposed State Plan Dates

**June 30, 2016** – Initial plan or complete plan due

**June 30, 2017** – Complete individual plan due if state is eligible for a one-year extension

**June 30, 2018** – Complete multi-state plan due if state is eligible for two-year extension (with progress report due June 30, 2017)
